1 NETWORK CONFORMANCE STATEMENT

1.0 INTRODUCTION

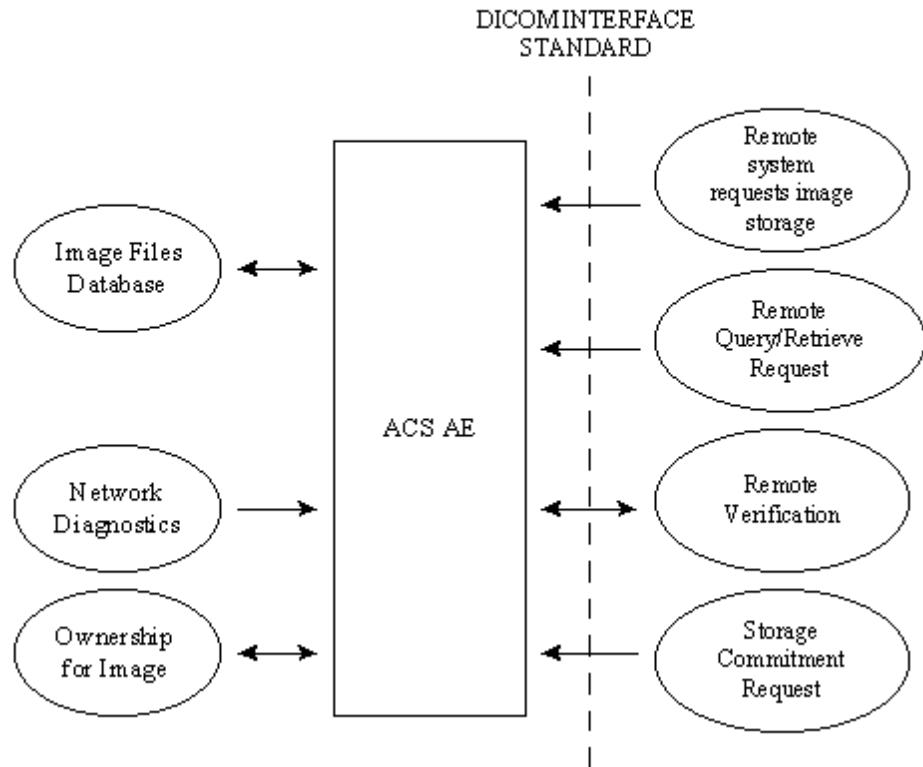

This section of the DICOM Conformance Statement specifies the compliance to DICOM conformance requirements for the relevant **Networking** features on this GEMS product. Note that the format of this section strictly follows the format defined in DICOM Standard PS 3.2 (Conformance). Please refer to that part of the standard while reading this section.

1.1 IMPLEMENTATION MODEL

1.1.1 Application Data Flow Diagram

All DICOM functionality on the Advantage Cluster Storage/Archive System (ACS) is handled by the ACS Application Entity (ACS AE). The Basic and Specific Application models for this device are shown in the following Illustration :

ILLUSTOTRITION 1-1
IMPLEMENTAION MODEL DATA FLOW DIAGRAM

There is only one Real-World Activity that will cause the Advantage Cluster Storage Application Entity (ACS AE) to initiate a DICOM association to remote DICOM Application Entity.

Real-World Activity, Network Test, causes the ACS AE to initiate an association to the Remote DICOM AE and request the reply of the echo test. This operation will be performed only by the GEMS Field Service Engineer.

There is no Real-World activity required for the ACS AE to respond to an incoming DICOM Store, Query/Retrieve, Verify or Storage Commitment. The ACS AE is always prepared to respond to a DICOM Store, Query/Retrieve, Verify or Storage Commitment by any Remote DICOM AE.

The ACS AE will perform the Real-World activity, Image Installation, after the remote AE sends an image to the Advantage Cluster Storage/Archive System product.

Once a Query request is received, the ACS AE will search the local database for all entries that match the key requested by the Remote AE and send back the list of matches. The ACS AE will also respond to an incoming retrieval request from a Remote AE by sending the image(s) to the Destination AE.

1.1.2 Functional Definition of AE's

The ACS AE initiates the following operation:

- Initiate an association with a Remote AE to diagnostic the connectivity to the Remote host. A C-ECHO-RQ request will be sent to the Remote AE once an association has established.

The ACS AE waits for association requests from Remote AEs that wish to perform the following operations:

- **Verification:** If a C-ECHO-RQ message is received, the ACS AE will send back a C-ECHO-RSP message with a status of “success”.
- **Image Storage:** If a C-STORE-RQ message is received, the ACS AE will receive the image and try to update the local database. If the image is stored successfully on storage media and the database updated a status of “success” will be returned in a C-STORE-RSP message.
- **Query:** If a C-FIND-RQ message is received, the ACS AE will search the database for the requested attributes and send back a C-FIND-RSP message containing a match and status of “pending”. After all matching records have been sent, a status of “success” will be returned in a C-FIND-RSP message. The Remote AE can terminate the query by sending a C-CANCEL-FIND-RQ message.
- **Retrieve:** If a C-MOVE-RQ message is received, the ACS AE will lookup its list of configured Remote AEs for the Destination AE. If the Destination AE is configured, the ACS AE will open a new association to the Destination AE and use C-STORE-RQ to send the image(s). The ACS AE will send a C-MOVE-RSP message with a

status of “pending” after each image is sent. When all images are sent or if ACS AE receives a C-CANCEL-MOVE-RQ a final C-STORE-RSP will be sent back with an appropriate status.

- **Storage Commitment:** If a N-ACTION message is received, the ACS AE search the SOP Instance on the local database. If the all SOP Instances exists, ACS AE will send back a N-EVENT-REPORT message with a status of “success”. If one or more SOP Instances don’t exist, the ACS AE would issue an N-EVENT-REPORT with a status of completed - failures exists. With the EVENT-REPORT it would include a list of the SOP Instances that were successfully stored and also a list of the SOP Instances for which storage failed.

1.1.3 Sequencing of Real-World Activities

Non Applicable.

1.2.1.1 Association Establishment Policies**1.2.1.1.1 General**

The DICOM Application Context Name (ACN), which is always proposed, is:

Application Context Name	1.2.840.10008.3.1.1.1
---------------------------------	------------------------------

The Maximum Length PDU negotiation is included in all association establishment requests.

The maximum length PDU for an association initiated by the ACS AE is:

Maximum Length PDU	32kbytes
---------------------------	-----------------

SOP class Extended Negotiation is not supported.

1.2.1.1.2 Number of Associations

The ACS AE can have associations as many as Remote AE initiated. But the number of associations are limited by hardware resources of Advantage Cluster Storage/Archive System.

1.2.1.1.3 Asynchronous Nature

Asynchronous mode is not supported. All operation will be performed synchronously.

1.2.1.1.4 Implementation Identifying Information

The Implementation UID for this DICOM v3.0 Implementation is:

Advantage Cluster Storage/Archive System Implementation UID	1.2.392.200045.4079.1
--	------------------------------

1.2.1.2 Association Initiation Policy

This AE attempts to initiate an association due to the C-MOVE sub-operation.

1.2.1.2.1 Real-World Activity <Verify to Remote AE>**1.2.1.2.1.1 Associated Real-World Activity**

This operation must be performed by the GE Medical Systems Field Service Engineer.

1.2.1.2.2.2.1 SOP Specific DICOM Conformance Statement for Image Storage SOP Class

If the C-STORE operation is terminated successfully, there is no effect on the stored Images. Although the temporary file is created to transfer image(s), it will delete after transmit automatically.

If the C-STORE operation is terminated by Error, there is no effect on the stored Images.

If the C-STORE operation is terminated by Warning, there is no effect on the stored Images.

The ACS AE will only send optional and private data elements from stored images that it has previously received as a C-STORE SCP, and will not add any new elements.

1.2.1.3 Association Acceptance Policy

Any operations of ACS AE are worked by the request of Remote AE.

When the ACS AE accepts an association for image storage, it will receive any images transmitted on that association and store the images on the disk.

It will also respond to queries from Remote AEs by sending matching entries. Any Remote AE can request and receive a list of images on the local database. The Remote AE must be configured in the local database manager's list of Remote AE for it to be able to retrieve images from ACS AE.

1.2.1.3.1 Real-World Activity <Verification Request from Remote AE>

This AE indefinitely listening for associations. No operator action is required to a verification message.

1.2.1.3.1.1 Associated Real-World Activity

The Real-World Activities associated with the verification request is to send a C-ECHO response message with a status of "success" to the requesting AE.

1.2.1.3.1.2.1 SOP Specific DICOM Conformance Statement for Verification SOP Classes

The ACS AE provides standard conformance to the DICOM Verification Service Class.

1.2.1.3.1.3 Presentation Context Acceptance Criterion

ACS AE accepts any number of Presentation Contexts listed in the Accepted Presented Context Table.

1.2.1.3.1.4 Transfer Syntax Selection Policies

ACS AE will prioritize Transfer Syntax in order of configuration table of ACS.

1.2.1.3.2 Real-World Activity < Receive Image(s)>

This AE is indefinitely listening for associations. No operator action is required to receive an image.

1.2.1.3.2.1 Associated Real-World Activity

The Real-World Activities associated with the Receive Image(s) operation are the storage of the image and registration to database on the disk drive of the Advantage Cluster Storage/Archive System.

1.2.1.3.2.2.1 SOP Specific DICOM Conformance Statement for Storage SOP Classes

The ACS AE conforms to the SOP's of the Storage Service Class at level 2 (full).

Following are the status codes the Application may send back to the SCU Equipment after performing the requested **Storage** :

Service Status	Status Codes	Further Meaning	Status Code sending explanation	Related Fields sent back to the SCU
Refused	A700	Out of resources	Lack of memory.	(0000,0902)
	A701	Out of resources	Lack of disk space.	(0000,0902)
	A702	Out of resources	Lack of media space.	(0000,0902)
Error	A900	Data Set does not match SOP Class	Wrong dataset value.	(0000,0901) (0000,0902)
	C000	Cannot understand	Other error.	(0000,0901) (0000,0902)
Warning	B000	Coercion of Data Elements	Can't convert some elements.	(0000,0901) (0000,0902)
Success	0000			None

In the event of a successful C-STORE operation, the image has been successfully been written to the disk. The image will then be accessed in the same manner as any other image by the applications on the Advantage Cluster Storage/Archive System

1.2.1.3.2.3 Presentation Context Acceptance Criterion

ACS AE accepts any number of Presentation Contexts listed in the Accepted Presented Context Table. It rejects requests from remote AE not listed in the local database.

1.2.1.3.2.4 Transfer Syntax Selection Policies

ACS AE will prioritize Transfer Syntax in order of configuration table of ACS.

1.2.1.3.3 Real-World Activity <Query Request from Remote AE>

This AE indefinitely listening for associations. No operator action is required to respond to a query request.

1.2.1.3.3.1 Associated Real-World Activity

The Real-World Activities associated with the query request is to search the local database for entries that match the request and send a C-FIND response message with a status of “pending” for each matching entry.

1.2.1.3.4.3 Presentation Context Acceptance Criterion

ACS AE accepts any number of Presentation Contexts listed in the Accepted Presented Context Table. It rejects requests from remote AE not listed in the local database.

1.2.1.3.4.4 Transfer Syntax Selection Policies

ACS AE will prioritize Transfer Syntax in order of configuration table of ACS.

1.2.1.3.5 Real-World Activity <Storage Commitment from Remote AE>

This AE indefinitely listening for associations. No operator action is required to a verification message.

1.2.1.3.5.1 Associated Real-World Activity

The Real-World Activities associated with the storage commitment is to send a N-EVENT-REPORT message with a status of “success” to the requesting AE.

1.2.1.3.5.2.1 SOP Specific DICOM Conformance Statement for Verification SOP Classes

The ACS AE provides standard conformance to the DICOM Storage Commitment Push Model Service Class.

1.2.1.3.5.3 Presentation Context Acceptance Criterion

ACS AE accepts any number of Presentation Contexts listed in the Accepted Presented Context Table.

1.2.1.3.5.4 Transfer Syntax Selection Policies

ACS AE will prioritize Transfer Syntax in order of configuration table of ACS.

1.3 COMMUNICATION PROFILES

1.3.1 Supported Communication Stacks (Parts 8, 9)

DICOM Upper Layer (Part 8) is supported using TCP/IP.

1.3.2 OSI Stack

OSI Stack not supported.

1.3.3 TCP/IP Stack

The TCP/IP stack is inherited from a UNIX Operating System.

1.3.3.1 API

Not applicable to this product.

1.3.3.2 Physical Media Support

Ethernet v2.0, IEEE 802.3

1.3.4 Point-to-Point Stack

A 50-pin ACR-NEMA connection is not applicable to this product.

1.4 EXTENSIONS / SPECIALIZATIONS / PRIVATIZATIONS**1.4.1 Standard Extended /Specialized/Private SOPs**

Not applicable.

1.5 CONFIGURATION**1.5.1 AE Title/Presentation Address Mapping**

Remote AE Title must be configured to access this product.

1.5.2 Configurable Parameters

The following fields are configurable for ACS AE:

- Local AE Title (default : ACS01)
- Local IP Address
- Accepting TCP/IP Port (default : 5900)

The following fields are configurable for every remote DICOM AE

- Remote AE Title
- Remote IP Address
- Responding TCP/IP Port

Note : All configurations should be performed by GEMS Field Service Engineer.

1.6 SUPPORT OF EXTENDED CHARACTER SETS

The Advantage Cluster Storage/Archive System supports the “DICOM supplement 9 Multi-byte Character Set Support”, Japanese Single-byte Character Set (ISO-IR 13) and Japanese Multi-byte Character Set (ISO-IR 87, ISO-IR 159) as extended character sets.
