

It's like a second set of eyes
when you need it most

Your time is valuable

In the labor and delivery room, decisions need to be made quickly. And when the vital patient data your staff needs to make these decisions isn't readily available, it may compromise patient care. GE Healthcare's Centricity™ Perinatal Fetal Strip Analytics with the Centricity Perinatal Connect module eliminates the hassle of collecting data from multiple systems and software programs because it gives caregivers the fetal strip information they need, all in one place. It's like an extra set of eyes when you need it most.

Make better decisions with better data

Today's maternal care units have changed. Clinicians are expected to do more with less. That's why risk mitigation in the labor and delivery unit has never been more critical. Centricity Perinatal Fetal Strip Analytics helps minimize these risks by changing the way maternal caregivers collect critical data like:

- FHR baseline
- FHR changes
- Decelerations: Early, late, variable, and prolonged using NICHD definitions
- Uterine activity/contraction patterns: Frequency and duration, peak intensity, and resting tone
- MVU calculations
- Assessment time frame can be chosen to be either 15 or 30 minutes

The difference is clear. And so is the data.

Centricity Perinatal Fetal Strip Analytics brings a whole new level of clarity to critical data—from analytics to data integration.

Fetal strip analytics

On-demand information about your patients is provided and it is retroactive up to 24 hours. Plus, it supports pattern recognition at the bedside so you can spot potential issues—and prevent them—before they ever even happen.

Data integration

Centricity Perinatal Fetal Strip Analytics with Centricity Perinatal Connect module takes data integration to a whole new level of efficiency by providing perinatal information and other contextual clinical data simultaneously—on one screen. And with the ability to interface with multiple devices, it consolidates information to help you make more informed decisions—faster.

- Document in the EMR while viewing the fetal monitor strip at the same time
- Access information as you need it—view the whole strip or focus on just one short time segment
- Review annotations charted in other systems on the fetal strip, when using a bi-directional interface
- See trends by reviewing compressed data from the current and historical fetal strips on one display

Centricity Perinatal Fetal Strip Analytics

Everything you need. Integrated. In one place.

Unlike other tools, Centricity Perinatal Fetal Strip Analytics with the Centricity Perinatal Connect Module brings all the data to you—in one convenient place:

- Integrates with major EMRs
- Backed by the power of GE Healthcare
- Can support the number of beds configured in Centricity Perinatal
- Live analytics for a singleton or twins in the central surveillance view
- Analytics messaging in the central surveillance view
- One-click documentation

Connect

Analytics

With 55 Million babies born on Centricity Perinatal, the proof is in the numbers.

Centricity Perinatal Fetal Strip Analytics can help put your unit on the road to success, and also transforms the way the maternal care environments work—from patient care to workflow and everything in between.
