A HEALTHCARE UPDATE

PERSPECTIVE

Wipro GE Healthcare expands manufacturing & supply chain

IMPACT

30+ years of elevating Healthcare in India

Destination India: Towards Vision 2047 for MedTech

Chaitanya Sarawate Managing Director, Wipro GE Healthcare and President & CEO, GE HealthCare South Asia

Wipro GE Healthcare's commitment to India from the last three decades has been a promise that took its roots in 1989 and has only strengthened over the years.

Partners to the country's healthcare agenda, at Wipro GE Healthcare, we are proud of the many milestones we have accomplished in the country- making hospitals more efficient, clinicians more effective, therapies more precise and patients healthier and happier. Further cementing this purpose, extending India's capabilities to the rest of the world, recently, Wipro GE Healthcare announced an investment of \$1 bn to boost manufacturing in India. As a part of this investment, the Wipro GE Healthcare 'Made in India' PET CT Discovery IQ will be exported to 15 countries. Additionally, the 'Made in India' Revolution Aspire CT, Revolution ACT and MR breast coils will be manufactured 'In India for the World'.

At a time when India is leapfrogging into its ambitious goal of becoming one among the top five global manufacturing hubs, our investment is testimony to the decades of partnership with India. We are proud of the years of investment in the country where we were able to unlock opportunities for the patients whose lives we touch, defining a 'new era' in healthcare aligned with India's vision.

From our four manufacturing plants to First '5G Innovation Lab' for GE HealthCare globally, 30+ products being developed with our global network, sold in over 70 countries to GE HealthCare's largest R&D centre outside the US, the 5G Innovation Lab, the first for GE HealthCare globally, which serves as a conduit for the interplay of exponential technologies, the country is home to the first of many firsts for us.

Three decades later, when we look at India as an opportunity for investments, we are looking at a market that is standing at the cusp of significant transformation. Poised to become the third largest economy in the world, India's potential is unleashing at an unprecedented pace. What's exciting to see is the integration of capable hardware with futuristic software, creating a strong bedrock for what will make India the global manufacturing and innovation hub.

For us, we aim to make the limitless in healthcare a reality for India, with India, for India and the world!

30 Years of Elevating Healthcare in India

1996
